

CELLINI MOONPHASE

THE LUNAR CYCLE

The only watch in the Cellini collection to include an astronomical function, the Cellini Moonphase indicates the time in the traditional way and features an exclusive display of the lunar cycle.

The Cellini Moonphase has a white lacquer dial with a blue enamelled disc at 6 o'clock showing the full moon and the new moon, the former depicted by a meteorite circle and the latter by a silver ring. The moonphase is read via the triangular indicator set at 12 o'clock on the subdial, as the full moon and new moon rotate through the lunar cycle.

This watch also displays the date around the circumference of the dial, via a centre hand with a crescent moon at its tip. This model is driven by a self-winding mechanical movement entirely manufactured by Rolex, whose patented moonphase module is astronomically accurate for 122 years.

The Cellini Moonphase is available in 18 ct Everose gold, with a 39 mm case, and is fitted on a brown alligator leather strap. This is the only strap in the Cellini collection to be offered with an elegant folding Crownclasp, also in 18 ct Everose gold.
