

## ROLEX BRACELET EXTENSION SYSTEMS

### COMFORTABLE AND FUNCTIONAL

Rolex watch bracelets are designed to offer the wearer maximum comfort while embodying elegance, one of the brand's core values. Rolex has, therefore, developed and patented ingenious extension systems, simple and functional, for the bracelets in its Oyster collection. These innovations, which do not require the use of any tools, make the watch a pleasure to wear under any conditions.

## ROLEX BRACELET EXTENSION SYSTEMS

---

### EASYLINK COMFORT EXTENSION LINK

Patented by Rolex in 1996, the Easylink rapid extension system allows the wearer to easily adjust the bracelet length for additional comfort. Discreetly integrated and tucked beneath the clasp, this extension system comprises a link that is easily pulled out or folded back on itself to lengthen or shorten the bracelet by approximately 5 mm.

### EXTENSION SYSTEMS FOR DIVERS' WATCHES

Rolex has developed extension systems specifically for its divers' watches so that they can be worn comfortably over a diving suit by adjusting the length of the bracelet without any need for tools.

- **ROLEX GLIDELOCK FINE-ADJUSTMENT SYSTEM**

This particularly inventive mechanism allows the bracelet length to be increased by some 20 mm in increments of approximately 2 mm, using a toothed panel located under the clasp cover. This allows the watch to be worn over a diving suit up to 3 mm thick. The Rolex Glidelock is fitted on the Submariner, Submariner Date, Sea-Dweller and Rolex Deepsea models.

The rack of the Rolex Glidelock system on the Rolex Deepsea can be lifted, allowing the bracelet length to be adjusted without having to remove the watch from the wrist.

- **FLIPLINK EXTENSION LINK**

This fold-out link allows the bracelets on the Rolex Deepsea and the Sea-Dweller to be extended by 26 mm.

The Sea-Dweller and the Rolex Deepsea are fitted with these two extension systems. When both systems are used together, they allow the watch to be worn over a diving suit up to 7 mm thick.
